Product information sheet Set ETAGON Rails

Item no. 234164

Benefits

- The BLANCO ETAGON Rails form the functional backbone of the ETAGON concept. In combination with the integrated step and the spacious bowl, they create a multi-level workstation that allows clear workflow in an elegant, value-adding solution.
- For ETAGON bowls in Silgranit and stainless steel, the BLANCO ETAGON Rails are included as standard. This multi-level workstation is fully functional right from the start. They can be ordered as a spart part, if needed.
- For ETAGON 500-U, 700-U and 6 in the ''Coloured Components'' range, the rails can be ordered separately in matching stainless-steel finishes. This enables you to create fully harmonised kitchen water places with coordinated components, Mixer taps and Soap dispensers - strengthening the overall design concept and supporting higher-value configuration choices.
- The ETAGON Rails sit stably on the integrated step, creating an additional level for holding pots, strainers or dishes.
- The rails can double as a trivet for hot cookware or serve as a discreet drying spot for kitchen cloths — practical benefits that help to communicate added value beyond the bowl itself.
- Food-safe materials and full dishwasher compatibility reduce care-related objections and support long-term use.
- ETAGON Rails are internally tested by BLANCO LABORATORIES GERMANY, fulfilling the BLANCO QUALITY PROMISE and ensuring durable, reliable performance over time.
